Business Diagnostics Guide

Diagnosing and Mitigating Safety and Health Risks within Women’s Businesses

Version: January 26, 2022

Primary Audience

Frontline-level staff and/or participants of Women’s Economic Empowerment (WEE) Actors. WEE Actors are entities or individuals that support the development or expansion of women’s businesses, provide livelihood or financial services, and/or support women (globally) in efforts to increase their access to economic opportunities, especially those living in developing economies.

Goal

Diagnose and mitigate safety and health risks within women’s businesses.

Objectives

Through the use of this guide, participants supported by WEE Actors will be engaged independently or through support of WEE Actor frontline-level staff to:

- Diagnose the safety and health risks for adults and children within participants’ businesses.
- Identify possible mitigation strategies for each risk diagnosed.
- Determine the possible resources, support, or training needed to support the participant in applying the mitigation strategy.
- Estimate a timeline for applying the mitigation strategy.
- Develop a means for evaluating or monitoring progress.

Funding is provided by the United States Department of Labor under cooperative agreement number IL-31469. 100% of the total costs of the project or program are financed with federal funds, for a total of $1,872,000 dollars. This material does not necessarily reflect the views or policies of the United States Department of Labor, nor does mention of trade names, commercial products, or organizations imply endorsement by the United States Government.

About the RICHES Project

Few would expect that investments in women’s enterprises are increasing the risk or incidence of harmful work for children (child labor) or adults. However, research conducted by the Reducing Incidence of Child Labor and Harmful Conditions of Work in Economic Strengthening Initiatives (RICHES) project unveiled that as women entrepreneurs struggle to manage the labor burdens of their businesses with household tasks and unpaid care work, many are turning to those closest in reach for help—their children.

Grameen Foundation, in partnership with the American Bar Association Rule of Law Initiative and funded by the U.S. Department of Labor, Office of Child Labor, Forced Labor and Human Trafficking (OCFT), launched the RICHES project with the goals of supporting women’s enterprises responsibly, and mitigating the risk of harmful work for children and adults or the use of other negative coping strategies. To achieve this goal, RICHES has developed a toolkit for Women’s Economic Empowerment (WEE) Actors to equip them with practical ideas and tools to integrate and assess child protection and safe business practices throughout their work. For the purposes of the RICHES project, WEE Actors are any entity or individual that supports the development or expansion of women’s businesses, provides livelihood or financial services, and/or supports women (globally) in efforts to increase their access to economic opportunities, especially those living in developing economies.

The RICHES toolkit is organized in three phases (see Figure 1 below).

**Phase 1** represents a *minimum set of practices* and related tools that all WEE Actors should have on hand and use to promote child protection and safe and healthy business practices within women’s economic initiatives and/or businesses. Phase 1 covers:
1. Building awareness of the risks to children and women’s health and safety when supporting women’s businesses or WEE activities;
2. Assessing the risks and identifying situations of harmful work for children and adults and how to remedy these issues;
3. Committing to Do No Harm principles when developing and/or implementing women’s economic initiatives; and
4. Knowing where to go for help and where to find resources.

**Phases 2 and 3** offer a more comprehensive approach to child protection and health and safe business practices through market research, training and assessments at the organizational level, direct participant training, product development, and monitoring and evaluation.
Figure 1: RICHES Toolkit for WEE Actors

To access the full toolkit, please consult https://grameenfoundation.org/riches/.
How to Use the Business Diagnostics Guide

The Business Diagnostics found in this guide are designed to be part of Phase 3: Engage Participants.

This guide includes four diagnostic tools that are complementary and designed for women entrepreneurs with two levels of literacy. Tools 1, 2, and 4 assume basic literacy while Tool 3 is purely graphical and can be used with participants with limited literacy:

- **Tool 1: Business Safety & Health Risk Diagnostic for Frontline Staff:** This tool is designed to be used by WEE frontline staff. Basic literacy required. If literacy levels among participants are high, this tool can also be adapted for use by participants. Specific adaptations are noted within the tool instructions.
- **Tool 2: Business Safety & Health Risk Diagnostic for Entrepreneurs:** This tool is designed to be used by participants. It is a simplified version of the Frontline Staff tool, and it does not include suggestions for mitigating or removing risks. It can be used in conjunction with, or be shared independently of, Tool 1. Basic literacy is required.
- **Tool 3: Business Safety & Health Risk Diagnostic for Entrepreneurs – Graphic Only:** This tool builds off a graphic shared in the Risky Business Curriculum that is implemented with participants. This tool can be used in lieu of Tool 2 or Tool 3 with illiterate participants to remind them of the risks that they should evaluate in their businesses. It can also be shared as a complement to Tools 2 or 3, if desired.
- **Tool 4: Business Safety & Health Risk Diagnostic for Entrepreneurs – Digital Version:** This tool provides the web address for a digital tool that builds off Tool 2. This tool can be used in lieu of Tool 2. While this tool was designed for participants, it can also be used by frontline workers as a job aid. It is not designed to capture data on individual participants. Basic literacy is required.

While NOT covered in this Guide, there is a version of Business Diagnostics covered in Tool 6 of the RICHES Market Research Guide that has been designed as a data collection tool to assist WEE Actors to observe and collect data on business safety and health risks among participant businesses to inform programmatic decisions.

**Process Description:** Each tool has its own instructions for use. Prior to using the Business Diagnostics in this guide, it is **strongly advised** that:

- **Frontline-level staff** complete the RICHES Understanding Harmful Work: Protecting Children and Adults training so that the content covered in the Diagnostics is well understood.
- **Participants** complete the RICHES Risky Business: Making Businesses Safe for Everyone curriculum. The curriculum trains participants to use a simple graphic of a hand to assess their businesses along five harmful types of risks for adults and children in our workplaces: 1. Physical, 2. Chemical, 3. Emotional, 4. Growth and Developmental, and 5. Educational. The acronym WISE, which stands for Warn, Isolate, Substitute and Eliminate, is also used to help participants think through strategies to mitigate harmful work for adults and children.
Adaptations Applicable for All Tools in this Guide:

1. The Business Diagnostic tools use the words “program participants” or “participants” to describe a service provider’s beneficiaries or female entrepreneurs. These terms can be replaced with client, beneficiary, entrepreneur, or other meaningful words prior to filling this out.

2. All guides and training materials within the RICHES Toolkit have been designed to ensure their accessibility, particularly for differently-abled individuals. For this reason, this tool has been developed in Microsoft Word, using at a minimum 12-point font, and graphics and tables have been labeled with alternative text. You may wish to adjust the sizes of the tables to allow for notetaking or adjust the font size if printing out for your specific use.

Languages: The Business Diagnostic tools are available in English, Filipino, French, and Spanish unless otherwise noted with each individual tool description.

Important Concepts to Note:

Rule of Thumb: If something is dangerous for an adult, it is dangerous for a child.

The tools in this guide assume that any risk identified for an adult creates a greater risk for children because they:

- have thinner skin so toxic substances are more easily absorbed;
- breathe faster and more deeply so they can inhale more airborne pathogens and dusts;
- are more prone to dehydration because they have greater body surface area per pound of weight;
- absorb and retain heavy metals (lead, mercury) in the brain more easily which can disrupt the endocrine system—which plays a key role in growth and development, hindering cognitive development, and affecting the entire nervous system;
- use more energy in growing so they are at higher risk from ingested toxins;
- require more sleep and rest for proper development;
- have less-developed thermoregulatory systems rendering them more sensitive to heat and cold;
- are often unaware of their rights as workers and their responsibilities to other workers;
- tend to be less able to discern the consequences of their actions and assess risks associated with various situations;
- are more susceptible to social pressures;
- are reluctant to speak up about difficulties they face at work and tend to lack bargaining power;
- are smaller than the average size worker—tools and safety equipment are generally designed for people who are physically larger and stronger; and
- lack job skills and experience to understand health and safety hazards and risks.

Unless specifically noted as relevant for children only, all risks outlined in this guide create hazards for adults and children.¹

Phase 3: Engage Participants

RICHES Business Diagnostics Guide Tools

Tool 1: Business Safety & Health Risk Diagnostic for Frontline-level Staff

Process Description: This tool is designed to be used by frontline staff during visits to a participant’s place of business to engage her in a collaborative discussion to identify business safety and health risks.

Materials Needed: At least 1 copy per business visited should be printed out prior to the visit.

Steps:

- **Step 1:** Schedule a time to meet with the participant to identify their business safety and health risks. Remember, this should be a collaborative process and should not be used to shame or punish the participant. It is meant to be a positive experience, resulting in an action plan the participant feels confident they can achieve.

- **Step 2:** Assess the business safety and health risks using the questions posed in the tool. Mark an X in column C if the risk exists.

- **Step 3:** For those where a risk exists, determine whether the risk is considered Serious (S), Moderate (M), or Low (L). Mark S, M, or L in column D. (See instructions in tool for how to classify these). **Remember the Rule of Thumb:** If something is dangerous for an adult, it is dangerous for a child.

- **Step 4:** In column E, collaboratively design with the participant and note the mitigation strategies that could be implemented. There are suggested actions provided to give ideas of possible mitigation strategies.

- **Step 5:** In the Action Plan, document up to three priority actions that the frontline staff or participant agrees to take, a timeline and any training or resources that may be needed from the organization, and steps both can take to monitor/measure the impact of agreed-upon action. (These action items can be adapted to match the commitment of the organization as well as the available products or services that can be promoted/offered to support the participant. For example, a financial service provider may be able to offer a special loan product to assist in making safety improvements).

Time Needed: Approximately 30 minutes to 1 hour per business, plus preparation/travel time.

Adaptations Needed:

1. You can delete the “Suggestions” provided in column E to increase the row size to provide ample room for notetaking.

2. If literacy levels among participants are high, this tool can also be adapted for use by participants. The instructions would need to be revised to remove reference to the steps a frontline staff person would take to engage the participant. For example, under Step 1, “At the participant’s place of business, discuss and observe each of the safety risks and mark with an X if the risk is observed or
present” could be replaced with “At the place of business, observe each of the safety risks and mark with an X if the risks is observed or present.”

3. Prior to using the Business Diagnostic, fill in the blank for the following statement found at the bottom of the Diagnostic: “If any of these conditions are identified, immediately address these with the business owner. If at any time a child is in physical danger or is showing signs of deprivation (not enough sleep, food, clothing), intimidation, or fear that cannot be addressed directly with the business owner, contact: _________________________________. If the Tool 1: Emergency Contact List from the RICHES Linkages Guide was completed during Phase 1, this number should be available. If not, you should supply a phone number for an entity that could assist if any child is found to be in immediate danger, such as police or child protection committees.

4. This Business Diagnostic tool is designed to be generic, applying to any business type. However, if there are common businesses that participants own that are supported by the WEE Actor, specific examples can be added to Column B “Concerns” and associated “Suggestions” in Column E. Specific occupational hazard publications often highlight the types of hazards to a worker. A few examples that may be consistent with women’s businesses are noted below:

1. Baker
2. Farmer, Dairy
3. Farm worker, Poultry
4. Diver, Indigenous Fisherman
5. Hair or Nail Salons
6. Handler, Animal
7. Mason
8. Mechanic, Automobile
9. Worker, field crop
10. Seaman/Seawoman, (Merchant marine)
11. Sewing

Businesses where children might work, provided by the Safe Work for Youth kit developed by the ILO, are noted below.

1. Car repair
2. Construction
3. Garments
4. Hotel cleaning
5. Housekeeper
6. Restaurant
7. Small factory
8. Store
9. Wood working

The Promoting and Protecting the Interests of Children who Work (PPIC-Work) project implemented in Egypt has also provided business-specific hazards for the following business types: Small Workshop, Bakery, Carpentry, and Restaurant.

The USDOL Occupational Safety and Health Administration (OSHA) has also provided key risks for Retail/Grocery Stores/Convenience Stores, Food Service/Fast Food, Maintenance, Office/Clerical Work, Outdoor Work, Construction and Agriculture. Given this is US-based, the risks may not cover all risks faced in other contexts.

Cost Drivers in Use of Tool: The primary cost driver from use of this tool is staff time to make any adaptations, if needed, and to visit participant businesses to conduct the diagnostic. In addition, costs for
printing the tools, if using hard paper copies is an important consideration.

**Risks to Consider: Caution:** The use of this tool is not meant to be punitive and should be used to facilitate a conversation with participant to identify both simple and more complex improvements to the business to reduce the risks of harm to all those involved (or present) in or at the business. The use of this tool, if not properly facilitated or introduced, can cause a participant to feel guilty about a situation that cannot be easily changed. Therefore, ensure frontline staff have completed the [RICHES Understanding Harmful Work](#) training prior to using these tools with participants. If possible, additional financial support, such as a top-up loan or commitment savings products could be used to help fund identified business improvements. When used in conjunction with the [RICHES Risky Business: Making Businesses Safe for Everyone](#) curriculum and Tools 2, 3, or 4 found in this guide that are designed to be used directly by participants, a positive working relationship with the participant can be established and result in improved business safety and health for the participant, and most importantly, her children or children present or working in her business.

**Languages:** This guide is available in English, Filipino, French, and Spanish.
Business Safety and Health Risk Diagnostic

Frontline-level Staff: _________________________________
Participant: _________________________________________
Number of children (18 and under) present: _______________

Date: _________________________________________
Type of Business Assessed: _______________________
Ages (estimated) of children: ______________________

Instructions:

Step 1: At the participant’s place of business, discuss and observe each of the safety risks mentioned in Column B, and in Column C mark with an X if the risk is observed/present.

Step 2: For all risks that have been marked with an X in Column C, note in Column D the seriousness, or priority of action, using the following descriptions and codes:

- Serious (S): Can cause death, short-term or permanent disability, and/or experienced frequently (daily/weekly)
- Moderate (M): Can cause illness, frequent pain, and/or happens at least once or twice a year
- Low (L): Treatable, temporary discomfort, and/or infrequently/rarely happens

Step 3: Discuss with the participant the possible mitigation strategies for any risks identified and note these in Column E. See the RULES of THUMB to the right for the strategies. Each risk below also provides examples of mitigation strategies that can be considered.

Step 4: Once the assessment is complete, review how many of the risks have been marked with an “S”. These should be prioritized first, followed by those with an “M” and then “L.” Develop a plan of action with the participant that considers the participant’s ability to cover the costs of the mitigation strategies.

Rules of thumb for mitigation strategies:

In taking preventive and protective measures, develop mitigation strategies and address the risk using the word WISE: Warn, Isolate, Substitute, Eliminate.

Elimination is the most effective strategy, and warning about hazards is the least effective strategy to address risks in a business. Using an example risk of “working at night,” sample strategies are provided in parentheses.

WARN: Communicate about, train, and supervise those working or present at their business to avoid hazards (Ex. Teach workers to wear high visibility (light colored or reflective) clothing when performing night work; utilize warning lights to bring more attention to nighttime physical hazards.)

ISOLATE: Put distance or other barriers between workers, equipment, or certain areas to protect workers and others from encountering risks. (Ex. Social distance, use personal protective equipment (PPE) such as gloves and masks, use gates, barricades, or ropes to block access to worksite areas that are unsupervised at night.)

SUBSTITUTE: Make changes to personnel, equipment, supplies, processes, or other factors to decrease risks in the business (Ex. Substitute lower with brighter lighting to improve visibility in workspaces.)

ELIMINATE: Completely remove a work task or condition; or stop a specific person, such as a child, from engaging in risky work (Ex. Eliminate nighttime work performed by children (generally from 8 p.m. to 6 a.m.)

</tr>
<tr>
<td></td>
<td>Depending on age of child, does the child work more than legally allowed limits (ex. More than 4 hours a day for a child under</td>
</tr>
<tr>
<td>age 15 or more than 8 hours for a child between ages 15-17?</td>
<td>doing.</td>
</tr>
</tbody>
</table>

**IMPORTANT | No one under the age of 18 should work on the following:**

- high structures (roofs, trees, walls) or equipment where they might fall (ladders, scaffolding, steep slopes)
- underground (caves, tunnels, pits) or under water (diving, standing in water or on damp ground for more than a few minutes)
- small spaces (tunnels, boxes, refrigerators)
- alone and away from others, or isolated from parents, adult caregivers, or trusted adults
- lifting heavy items or carrying loads for long distances
- operating or working close to heavy or dangerous machinery, such as equipment that cuts or crushes, equipment that is motorized or powered by an engine, machines that can trap the hand, foot, hair, or garment
- long hours or at night
- with or near toxic chemicals
- places where there is risk of attack going to and from work
- demanding heavy responsibility for others’ safety (such as a young child caring for an infant) or goods (such as a young child manning a business while an adult is absent)

If any of these conditions are identified, immediately address these with the business owner. If at any time a child is in physical danger or is showing signs of deprivation (not enough sleep, food, and clothing), intimidation, or fear that cannot be addressed directly with the business owner, contact: ________________________________.

**Tool 2: Business Safety & Health Risk Diagnostic for Entrepreneurs**

**Process Description:** This tool is designed to be used by participants to support them in identifying business safety and health risks present in their own business. **Remember:** It is advised that participants complete the [RICHES Risky Business: Making Businesses Safe for Everyone](#) curriculum prior to using this tool. Through use of the curriculum, participants are trained to use a simple graphic of a hand to assess harmful risks for adults and children in workplaces. From thumb to pinky finger, participants remember five risks: 1. Physical, 2. Chemical, 3. Emotional, 4. Growth and Developmental, and 5. Educational.

**Materials Needed:** At least 1 copy per business visited should be printed and provided to the participant.

**Steps:**
- **Step 1:** Share at least 1 copy of this diagnostic tool with each participant.
- **Step 2:** Read or have the participant refer to the instructions in the diagnostic tool. Encourage them to engage their children or those they care for or engage in the business to complete the diagnostic.

**Time Needed:** Approximately 30 minutes.

**Adaptations Needed:** No adaptations needed.

**Cost Drivers in Use of Tool:** The primary cost driver from use of this tool is staff time to share with participants, and the participant’s time to complete the assessment.

**Risks to Consider:** **Caution:** The use of this tool is not meant to be punitive and should be used to facilitate a conversation with the participant to identify both simple and more complex improvements to the business to reduce the risks of harm to all those involved (or present) in or at the business. The use of this tool, if not well facilitated or introduced, can cause a participant to feel guilty about a situation that cannot be easily changed. The frontline-level staff facilitating this tool should be prepared to support the participant where possible, by offering training, specific financial services that could be used to help make business safety improvements, or by linking the participant to other local resources.

**Languages:** English, Spanish, Filipino, and French.
Business Safety & Health Risk Diagnostic for Entrepreneurs

**REMEMBER:** There are 5 harmful types of risk in our businesses: (1) physical, (2) chemical, (3) emotional, (4) growth and developmental, and (5) educational.

**Instructions**

**Step 1:** Look at your business through *your own* eyes. What risks do you see? Look at your business through *your child’s* eyes. What risks do you see? What might you do to reduce business safety and health risks for yourself, your employees, and your children?

**Step 2:** Note your concerns and possible actions you can take to reduce business safety and health risks. You may choose to do this with your children present and engage them in the exercise.

**Step 3:** Indicate which threats are the greatest priority, or the ones you most want to address to increase safety? What is the biggest risk you identified to your children—what can you do about it? What support do you need to improve working conditions at your business? Mark them as “High,” “Medium,” or “Low.” Where “High” represents the most danger and highest likelihood of occurring, “Medium” represents moderate danger and likelihood of occurring, and “Low” represents limited danger or infrequent likelihood of occurring.

**Step 4:** What is one thing you can do to better protect yourself and your children while you work? In the column “I will…” note down concrete steps you plan to take. **REMEMBER** the word **WISE** for identifying mitigation strategies to address the risks: Warn, Isolate, Substitute, Eliminate.

- **Warn:** Communicate about, train, and supervise those working or present at your business to avoid hazards.
- **Isolate:** Limit exposure to the risk (i.e., by creating a barrier to minimize exposure to the risk or by limiting amount of time or the time of day one performs tasks).
- **Substitute:** Replace the task with a different one.
- **Eliminate:** Stop the task altogether.

Tool 3: Business Safety & Health Risk Diagnostic for Entrepreneurs – Graphic Only

Process Description: This tool is designed to be used by participants to support them in identifying business safety and health risks present in their own business. Remember: It is advised that participants complete the RICHES Risky Business: Making Businesses Safe for Everyone curriculum prior to using this tool (either through training provided by frontline-level staff or using the digital curriculum). Through use of the curriculum, participants are trained to use a simple graphic of a hand to assess harmful risks for adults and children in workplaces. From thumb to pinky finger, participants remember five risks: 1. Physical, 2. Chemical, 3. Emotional, 4. Growth and Developmental, and 5. Educational. In the paper version of the curriculum, Technical Learning Conversation (TLC) 1: Identifying 5 Workplace Safety Risks, TLC 2: Identifying Harmful Work Using the 3 Ds, and TLC 3: Using WISE Solutions to Address Harmful Work, are the most relevant to train participants on how to identify risks and mitigate them. All sessions from the digital version should be used either directly by the participants or facilitated by frontline-level staff.

Materials Needed: At least 1 copy per business visited should be printed out and provided to the participant.

Steps:
- Step 1: Share at least 1 copy of the diagnostic tool with each participant.
- Step 2: Remind the participant of the five harmful types of risks for adults and children in workplaces: 1. Physical, 2. Chemical, 3. Emotional, 4. Growth and Developmental, and 5. Educational by referring to the pictures on the hand. If using this separately from the Risky Business Curriculum, use Technical Learning Conversation (TLC) 1: Identifying 5 Workplace Safety Risks, TLC 2: Identifying Harmful Work Using the 3 Ds, and TLC 3: Using WISE Solutions to Address Harmful Work, or all Risky Business digital sessions to train participants on how to identify risks and mitigate them.

Time Needed: Approximately 5 minutes.

Adaptations Needed: No adaptations expected.

Cost Drivers in Use of Tool: The primary cost driver from the use of this tool is staff time to share with participants, and the participant’s time to complete the assessment.

Risks to Consider: Caution | The use of this tool is not meant to be punitive and should be used to facilitate a conversation with participant to identify both simple and more complex improvements to the business to reduce the risks of harm to all those involved (or present) in or at the business. The use of this tool, if not well facilitated or introduced, can cause a participant to feel guilty about a situation that cannot be easily changed. The frontline-level staff facilitating this tool should be prepared to support the participant where possible, by offering training, specific financial services that could be used to help make business safety improvements, or by linking the participant to other local resources.

Languages: No translations necessary.
**Tool 4: Business Safety & Health Risk Diagnostic for Entrepreneurs – Digital Version**

**Process Description:** This tool is designed to be used by participants to support them in identifying business safety and health risks present in their own business. Currently the tool does not collect any data but helps a participant (or frontline-level staff if they are using this tool as a job aid) to identify risks and to understand how to mitigate them.

**Remember:** It is advised that participants complete the RICHES Risky Business: Making Businesses Safe for Everyone curriculum prior to using this tool (either through training provided by frontline-level staff or using the digital curriculum). Through the use of the curriculum, participants are trained to use a simple graphic of a hand to assess harmful risks for adults and children in workplaces. From thumb to pinky finger, participants remember five risks: 1. Physical, 2. Chemical, 3. Emotional, 4. Growth and Developmental, and 5. Educational. In the paper version of the curriculum, Technical Learning Conversation (TLC) 1: Identifying 5 Workplace Safety Risks, TLC 2: Identifying Harmful Work Using the 3 Ds, and TLC 3: Using WISE Solutions to Address Harmful Work, are the most relevant to train participants on how to identify risks and mitigate them. All sessions from the digital version should be used either directly by the participants or facilitated by frontline-level staff.

**Materials Needed:** Share the link to the digital tool with participants, either through email, SMS, or other digital means. The link can be found here: RICHES Business Diagnostic App.

**Steps:**

- **Step 1:** Share the link to the digital diagnostic tool with each participant.
- **Step 2:** The first screen they should see requires them to select their Country, Gender, Age, and Type of Business from a drop-down menu. Prior to clicking “Start Assessment” the participant can review the types of mitigation strategies associated with the word WISE: Warn, Isolate, Substitute and Eliminate, and their meanings. To navigate the words, click on the small icons underneath the white box. Then, click “Start Assessment”.
- **Step 3:** Inform participants that there are 25 questions in total that align with the five business safety and health risks for adults and children in workplaces: 1. Physical, 2. Chemical, 3. Emotional, 4. Growth and Developmental, and 5. Educational.
- **Step 4:** Participants should use the questions to guide an assessment of their business. If they answer “Yes” to the question, a “Suggestion” on how to mitigate or remove the risk is provided. After completing each question, they should click “Next.” They can also click “Previous” to go back. They can use this tool repeatedly to identify risks and seek ideas to mitigate those risks.

**Time Needed:** Approximately 10 minutes.

**Adaptations Needed:** No adaptations expected.

**Cost Drivers in Use of Tool:** The primary cost driver to use this tool is in its sharing (costs for sending via SMS or other digital means) and the data costs incurred by the participant.
Risks to Consider: Caution: The use of this tool is not meant to be punitive and should be used to facilitate a conversation with participant to identify both simple and more complex improvements to the business to reduce the risks of harm to all those involved (or present) in or at the business. The use of this tool, if not well facilitated or introduced, can cause a participant to feel guilty about a situation that cannot be easily changed. The frontline-level staff facilitating this tool should be prepared to support the participant where possible, by offering training, specific financial services that could be used to help make business safety improvements, or by linking the participant to other local resources.

Languages: This tool was developed using Google technology; therefore, Google will detect the IPS address of the user and suggest a translation.
Annexes

Additional Resources

According to the International Labor Organization (ILO), work hazards for youth consist of safety, physical, ergonomic, biological, chemical, and psychological. The categories used by RICHES are mapped to those categories (see Figure 2 below). In addition, the ILO notes key risk factors that are specific to young workers, such as their stage of physical, psychosocial, and emotional development, cross-cutting issues such as their gender, presence of disabilities or their migration status may determine the type of work they are allowed to do, and job skills and work experience that is generally limited. Another important risk is a youth’s level of education which plays an important role in their ability to transition to stable and decent employment as well as their level of awareness of business hazards that may prevent injury or illness.

This tool has been adapted from several existing resources:

- The Promoting and Protection the Interests of Children who Work (PPIC-Work) project’s Hazard Assessment and Mitigation in the Workplace manual
- The International Labour Organization’s Safety and Health of Young Workers
- The United States Department of Labor Occupational Safety and Health Administration’s publication on Workplace Hazards for Young Workers.
- The Center for Disease Control and Prevention guidance for Healthy Pets, Healthy People.
- The World Health Organization publication on Healthy Workplaces: a Model for Action - For Employers, Workers, Policymakers and Practitioners.
- The International Labour Organization’s A Safe and Healthy Return to Work During the COVID-19 Pandemic.
The table below depicts the types of risks used by the ILO compared to the dimensions shared in the RICHES tools:

**Term**

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Child Work</td>
<td>Household chores and forms of legal work, including light work. This type of work does not interfere with schooling. According to international standards, the minimum</td>
</tr>
<tr>
<td><strong>Harmful Work for Adults (Unacceptable Conditions of Work or UACW)</strong></td>
<td>Any conditions of work that are considered to be detrimental, such as wages that do not provide for a decent living for workers and their families, hours of work that exceed eight hours a day/48 hours per week, and poor occupational health and safety conditions. Harmful working conditions are most present in the informal sector, where many female-run enterprises are run, vulnerable work, such as contract work and work in environments that lack or have limited legal protections, in forced labor, which is the most egregious form of work and is particularly common in domestic work, construction, and manufacturing, agriculture, horticulture, and in the hospitality and sex industries, or precarious work, which includes unstable work situations such as temporary and/or informal work such as the domestic care work sector, the cleaning sector, kitchen work, market work, and manufacturing.</td>
</tr>
<tr>
<td><strong>Frontline-level Staff</strong></td>
<td>Frontline-level staff refers to WEE actor staff who work directly with women to help achieve WEE objectives and are primarily based at the field-level. Frontline-level staff may be trainers, community agents, credit officers, social workers, agricultural extension agents, among others.</td>
</tr>
<tr>
<td><strong>Participants</strong></td>
<td>Participants refer to women receiving services provided by WEE Actors. Participants can be women living in developing economies that own businesses, engage in livelihood activities, are clients of financial service providers, or participate in trainings to increase their access to economic opportunities. Depending on the WEE actor, they can also be referred to as clients, beneficiaries, or members.</td>
</tr>
<tr>
<td><strong>RICHES Toolkit</strong></td>
<td>A collection of tools that seek to assess the risks of, raise awareness about, and mitigate the risks of child labor and harmful working practices among women’s economic empowerment (WEE) actors and their participants. The RICHES toolkit includes: an online portal for accessing the toolkit, risk assessments and diagnostics for assessing risks of child labor and harmful business practices, market research and monitoring and evaluation tools, paper-based and video-based dialogue-based curriculum, management and frontline-level staff training, guides for linking out to child protection organizations and facilitating intra-household and community</td>
</tr>
<tr>
<td>Women’s Economic Empowerment (WEE)</td>
<td>Women’s economic empowerment is a process by which women increase their power to succeed as equal and active participants in the economy. This includes women’s enhanced access to and control of human, economic, and social resources (power over); individual agency to make independent decisions that benefit themselves, their families, communities, and nations (power to); personal assets, including knowledge, skills, self-confidence, resilience, and ability to take and manage risk (power within); and collective assets, such as support services and networks (power with). Women’s economic empowerment is critical to achieving gender equality, poverty reduction, economic growth, and other sustainable development goals.</td>
</tr>
<tr>
<td>-----------------------------------</td>
<td>---------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Women’s Economic Empowerment (WEE) Actor or Initiatives</td>
<td>Broadly refers to entities or individuals that support the development or expansion of women’s businesses, provide livelihood or financial services and/or support women (globally) in efforts to increase their access to economic opportunities, especially those living in developing economies. WEE Actors can be microfinance institutions, savings group support organizations, non-governmental organizations, donors, investors, or government programs.</td>

Acknowledgments

This guide was developed by Bobbi Gray with support from Alison Bardsley, Amelia Kuklewicz of Grameen Foundation and Chris Camillo and Deepa Ramesh of the American Bar Association Rule of Law Initiative (ABA ROLI) with funding from the U.S. Department of Labor. Samuel Ntow of Grameen Foundation designed the digital Business Diagnostic tool. Illustrations were designed by Lorraine Harris Randle and Dede Mulyana; graphics were designed by Lilli Beth Gelvezon, independent consultant, and Jenna Smith of Grameen Foundation. Final editing was conducted by Jenna Smith.

The team is grateful to Sarah Sunderlin Simpson of the Office of Child Labor, Forced Labor, and Human Trafficking (OCFT) for her direction, editing, design input, and support during the development of this tool. The team also thanks the many OCFT staff who took time to review drafts and provide design and editing support, including Kristen Pancio, Alexander Billings, and Tanya Shugar.

Finally, the team extends our deep gratitude to all those who helped organize and participate in pilot trainings and learning events, especially for their creative ideas, recommendations, and suggestions that helped guide the refinement of this tool. In particular, the team wishes to acknowledge the following individuals:

- Johanna Ryan, Vision Fund International;
- Jennifer Denomy, Mennonite Economic Development Associates (MEDA);
- Edgar Aguilar Paucar and Patricia Richter, International Labour Organization (ILO);
- Anna Kanze, Grassroots Capital;
- Glenn Anciano, Community Economic Ventures, Inc. (CEVI), the Philippines;
- Hans Kevin Madanguit, SPARK, Philippines;
- DTI: Bureau of Small and Medium Enterprise Development;
- FUNDAZUCAR;
- Adetunji Afolabi, Nigerian Microfinance Platform;
- Abel Ovenseri, LAPO Microfinance Bank, Nigeria;
- Kenneth Okakwu, LAPO Institute for Microfinance and Enterprise Development, Nigeria.
